
(a) Reactive policy
o_t, ℓ
Policy
$\pi(a \mid o, \ell)$
a_t
Environment
Actions are selected without exposing predictions of candidate consequences.
(b) Plan through a model
candidate actions
o_t
World model
Planner / MPC
a_t^*
Predicted rollouts support selection; cost depends on representation and search.
(c) Unified world-action
o_t, ℓ
World-action model
$a_{t:t+H}$
Future $\hat{o}$
Value $\hat{V}$
Dashed outputs are optional. Prediction, value, and selection depend on the architecture.
